Investment Philosophy

Aeon Investment Management's equity investment style is Growth At a Reasonable Price (GARP) and modelling Implied vs. Sustainable Growth. We also utilise our in-house Currency Model for foreign asset allocation and the Fear & Greed Index for appropriate protective structure overlays. Aeon Balanced Prescient Fund's investment strategy encompasses active asset allocation and active management of underlying equity and fixed income assets. The fund has five diversified sources of alpha (GARP Active Equity, Smart Multi-Factor Equity, GARP Foreign Equity, Diversified Income, Derivative Protective Overlay).

Fund Objectives

The Aeon Balanced Prescient Fund seeks to achieve:

- Return target of CPI +5%
- Inflation-beating returns by investing in the full spectrum of domestic and foreign equity and fixed income markets
- Provide investors with stable income and modest capital appreciation in the long run
- Manage risk through disciplined portfolio construction
- Employ low cost trading techniques

Fund Managers

Asief Mohamed
Chief Investment Officer
B.Com. CA(SA), CFA

Jay Vomacka
Portfolio Manager
CFA, MSc(Eng)(Ind)(Elec), CFTe

Fund Information

Benchmark: CPI
Inception date: 1 November 2012
Fund size: R 91.53 million
Investment horizon: Five years plus
Classification: South African - Multi Asset - Medium Equity
Regulation 28 compliant: Yes

Risk Profile

Conservative	Moderate	Aggressive
--------------	-----------------	------------

- These portfolios generally hold more equity exposure than low risk portfolios but less than high risk portfolios.
- In turn the expected volatility is higher than low risk portfolios, but less than high risk portfolios.
- The probability of losses are higher than that of the low risk portfolios, but less than high risk portfolio.
- Expected potential long term investment returns could therefore be lower than high risk portfolios due to lower equity exposure, but higher than low risk portfolios.

Assets managed by: Aeon Investment Management

Fund Performance Review & Market Commentary

The Aeon Balanced Prescient Fund underperformed its benchmark by 48 bps for the third quarter of 2018 and is underperforming its benchmark by 400 bps over a one-year period on a net return basis.

The strongest sector for the third quarter ended September was Resources as Sasol, Anglo American and BHP Billiton benefited off the back of positive global news and a stronger oil price. Healthcare was the weakest sector as a negative surprise from Aspen coupled with an uncertain global and local regulatory outlook weighed on counters.

Globally, market volatility and uncertainty remained the major theme. Geopolitical risk has increased substantially. The global trade war narrative has continued to plague the headlines. Trump's trade wars against an ever-increasing amount of nations remains an ongoing concern for investors. This is not being aided by comments from Trump threatening a withdrawal from the World Trade Organisation. Emerging market currencies such as the Rand have been under pressure this year and this is especially so given the decreasing economic GDP growth projections of South Africa. This is expected to continue as Fed hike rates are expected at an increasing rate going forward. All this results in negative market sentiment and a risk-off mentality and this can be seen in the volatile market returns.

Locally, the market has been at the mercy of these international events. Local politics has not helped the matter. Issues with land reform, mining charter uncertainty, unemployment worsening, and wage negotiations are all still on-going. High positive expectations on the change in leadership have been priced in but leadership battles continue within the ANC in the run up to the national elections in May 2019. The original positive momentum has dwindled as hard policy changes have yet to be made and implemented. Furthermore, South Africa entered a technical recession as GDP fell for two consecutive quarters. This coupled with SA's lack of fiscal options may weigh on rating's agencies metrics.

Local corporate events didn't help lift sentiment. China have proposed limits on children's online gaming activities, which saw Tencent and its shareholder Naspers fall sharply post the announcement. Many "market darlings" became "fallen angels" as company results missed market expectations and provided a cautious forward outlook. Further negative sentiment from foreigners gained traction weighing on the markets and increasing broad market losses.

Looking forward, the optimistic growth expectations set for the local economy seem to be disappointing. Real actions have been taken, but more certainty in policies needs to be accomplished. Globally, inflation and GDP numbers will be key to try gauge the timing and level of tighter monetary policies. All this leads to further uncertainty in the global markets. We have seen pockets of opportunity begin to surface and monitor these closely. Astute stock picking that delivers superior value through the cycle and companies whose cash flows support earnings tend to outperform the market.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information.

Below are fund specific risks:

Default risk: The risk that the issuers of fixed income instruments (e.g. bonds) may not be able to meet interest payments nor repay the money they have borrowed. The issuers credit quality is vital. The worse the credit quality, the greater the risk of default and therefore investment loss.

Derivatives risk: The use of derivatives could increase overall risk by magnifying the effect of both gains and losses in a Fund. As such, large changes in value and potentially large financial losses could result.

Developing Market (excluding SA) risk: Some of the countries invested in may have less developed legal, political, economic and/or other systems. These markets carry a higher risk of financial loss than those in countries generally regarded as being more developed.

Foreign Investment risk: Foreign securities investments may be subject to risks pertaining to overseas jurisdictions and markets, including (but not limited to) local liquidity, macroeconomic, political, tax, settlement risks and currency fluctuations.

Interest rate risk: The value of fixed income investments (e.g. bonds) tends to be inversely related to interest and inflation rates. Hence their value decreases when interest rates and/or inflation rises.

Property risk: Investments in real estate securities can carry the same risks as investing directly in real estate itself. Real estate prices move in response to a variety of factors, including local, regional and national economic and political conditions, interest rates and tax considerations.

Currency exchange risk: Changes in the relative values of individual currencies may adversely affect the value of investments and any related income.

Geographic / Sector risk: For investments primarily concentrated in specific countries, geographical regions and/or industry sectors, their resulting value may decrease whilst portfolios more broadly invested might grow.

Derivative counterparty risk: A counterparty to a derivative transaction may experience a breakdown in meeting its obligations thereby leading to financial loss.

Liquidity risk: If there are insufficient buyers or sellers of particular investments, the result may lead to delays in trading and being able to make settlements, and/or large fluctuations in value. This may lead to larger financial losses than expected.

Equity investment risk: Value of equities (e.g. shares) and equity-related investments may vary according to company profits and future prospects as well as more general market factors. In the event of a company default (e.g. bankruptcy), the owners of their equity rank last in terms of any financial payment from that company.

The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 15:00 or 17:00 depending on the nature of the Fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.

For any additional information such as fund prices, brochures and application forms please go to www.aeonim.co.za

Glossary

Annualised performance: Annualised performance show longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period. Actual annual figures are available to the investor on request.

Highest & Lowest return: The highest and lowest returns for any 1 year over the period since inception have been shown.

NAV: The net asset value represents the assets of a Fund less its liabilities.

cpu: cents per unit.

Alpha: Denoted the outperformance of the fund over the benchmark.

Standard Deviation: The deviation of the return stream relative to its own average.

Max Drawdown: The maximum peak to trough loss suffered by the Fund since inception.

Max Gain: Largest increase in any single month

% Positive Month: The percentage of months since inception where the Fund has delivered positive return.

Dividend Yield: The weighted average dividend yield of all the underlying equity in the Fund. The dividend yield of each company is the dividends per share divided by the price.

PE Ratio: The weighted average price earnings ratio of all the underlying equity in the Fund. The price earnings ratio of each company is the price divided by the earnings per share.

High Water Mark: The highest level of performance achieved over a specified period.
