Fund Description

The Aeon Smart Multi-Factor Equity Prescient Fund strategy employs a multiple fundamental factor model as its base. Systematic security selection and trading models are used to achieve the fund's objective of outperforming the SWIX benchmark at low cost and tracking error. The portfolio is constructed in a risk managed framework.

Investors should consider the Aeon Smart Multi-Factor Equity Prescient Fund if they have a long term investment horizon (5-years or longer), and are looking for capital gains at low cost.

Fund Objectives

Aeon Smart Multi-Factor Equity Prescient Fund seeks to achieve:

- Achieve consistent outperformance of the benchmark
- Generate excess returns that are positive, stable, explainable and replicable
- Target tracking error below 2%
- Manage risk through disciplined portfolio construction.

The portfolio has adhered to its fund objectives.

Fund Managers

Asief Mohamed

Fund Performance Review & Market Commentary

The Aeon Smart Multi-Factor Equity Prescient Fund outperformed its benchmark by 170 bps on a net return basis for the second quarter of 2022 and is underperforming its benchmark by 88 bps over a one-year period.

Overweight positions in Naspers and Prosus were the main positive contributors to return for the second quarter of 2022. Overweight positions in Sirius Real Estate and Anglo American were the main detractors. The benchmark equity index was down 10.60% for the second quarter of 2022.

The quarter ended June was broadly negative for world markets as investors grew increasingly concerned about prospects for the world's economic growth rate given the current high inflation numbers and increasing interest rate environment. Monetary policy tightening from most central banks raised fears that economic growth will be negatively affected while inflation persists resulting in a stagflationary environment. Covid-19 fears have been raised in China once again with China's Zero-Covid policy affecting global supply chains. This is further exacerbated by the Russian invasion of Ukraine. Hence, market volatility remains high. The West continues to respond to the war by imposing strict sanctions on Russia resulting in increasing energy and commodity costs, especially for the European block. The result of higher energy prices, together with higher inflation expectations resulted in many investors adopting a global risk-off stance. The sector that fared best for the quarter ended June was Consumer Staples led by index heavyweight British American Tobacco. Resources was the weakest sector for the quarter led by Anglo American, Gold Fields and Sibanye Stillwater.

Previously, global central banks and governments have been accommodative as a reactionary measure to tackle the Covid-19 pandemic. This resulted in positive market sentiment with continuous assurances from the Fed in an environment of low-interest rates. However, this stance has shifted significantly. The Fed now indicates that it would keep raising rates as a measure to tackle increasing inflation. This tone has also been adopted by many global central banks. More recently, the US and Eurozone's inflation figures have been above expectations, primarily because of high energy costs. The Fed's key focus has shifted towards managing this inflation. This has resulted in the expectation for more aggressive rate hikes in the future.

Locally, sentiment has somewhat improved following improved trade balances because of strong commodity prices. However, the country still faces structural growth obstacles such as Eskom as ongoing loadshedding impacts businesses and consumer trade and confidence. South Africa's fiscal position remains constrained by poor legacy policy decisions and ineffective implementation by the government. Financial conditions may be difficult for South Africa in the years ahead with low GDP growth rates and high unemployment translating into weak consumer spending and increasing inequality.

Looking forward, growth expectations for the local economy seem to be dependent on global growth, commodity prices, improving confidence, positive local government action, Covid-19 containment measures, and general inflation expectations and management. Astute stock picking with our Growth at Reasonable Price (GARP) philosophy that delivers value through the cycle and a focus on companies whose cash flows support earnings is expected to benefit the portfolios moving forward.

As part of showcasing our portfolio, we aim to provide you with some insight into portfolio companies on a regular basis. This quarter, Tiger Brands is discussed, as a new investment within our funds. Tiger Brands is a well-regarded food producer with an extensive portfolio of locally loved brands such as Koo, Jungle Oats and Ingrams. Tiger Brands has faced tough competition as a result of macro and company specific headwinds. As a result of the current macro environment, consumers have begun downtrading and switching to private label and inhouse brands. This has impacted Tiger Brands which has historically commanded a 'price premium'. Tiger Brands has also been impacted by operational issues with inefficient and aging manufacturing facilities, which resulted in the well-publicized Listeriosis crises. Further, Tiger Brands has more recently been impacted by the ongoing Russia/Ukraine war with surging maize and wheat prices, impacting input costs. As a result, Tiger Brands has seen their share price falling nearly 70% from its high. We have begun to see a refreshed management team take pro-active steps to addressing issues, with management being more aggressive to managing volume/price mix, closing loss making divisions, improving innovation and culture, and a clear focus on improving the operational margin. As a result, we believe the market is penalising Tiger Brands far too aggressively. We have also begun to see better maize and wheat prices as a result of new global supply, and as a result the counter screens well in terms of value and value fundamentals. Furthermore, the company has an attractive dividend profile, is highly cash generative, and has a strong balance sheet. We are confident in the long-term investment case.

Disclaimer

Collective Investment Schemes in Securities (CIS) should be considered as medium to long-term investments. The value may go up as well as down and past performance is not necessarily a guide to future performance. CIS's are traded at the ruling price and can engage in scrip lending and borrowing. The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. A schedule of fees, charges and maximum commissions is available on request from the Manager. There is no guarantee in respect of capital or returns in a portfolio. A CIS may be closed to new investors in order for it to be managed more efficiently in accordance with its mandate. CIS prices are calculated on a net asset basis, which is the total value of all the assets in the portfolio including any income accruals and less any permissible deductions (brokerage, STT, VAT, auditor's fees, bank charges, trustee and custodian fees and the annual management fee) from the portfolio divided by the number of participatory interests (units) in issue. Forward pricing is used. The Fund's Total Expense Ratio (TER) reflects the percentage of the average Net Asset Value (NAV) of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. During the phase in period TER's do not include information gathered over a full year. Transaction Costs (TC) is the percentage of the value of the Fund incurred as costs relating to the buying and selling of the Fund's underlying assets. Transaction costs are a necessary cost in administering the Fund and impacts Fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Fund, investment decisions of the investment manager and the TER.

Where a current yield has been included for Funds that derive its income primarily from interest bearing income, the yield is a weighted average yield of all underlying interest bearing instruments as at the last day of the month. This yield is subject to change as market rates and underlying investments change.

The Manager retains full legal responsibility for any third-party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks; and potential limitations on the availability of market information. The investor acknowledges the inherent risk associated with the selected investments and that there are no guarantees. Please note that all documents, notifications of deposit, investment, redemption and switch applications must be received by Prescient by or before 13:00 (SA), to be transacted at the net asset value price for that day. Where all required documentation is not received before the stated cut off time Prescient shall not be obliged to transact at the net asset value price as agreed to. Funds are priced at either 3pm or 5pm depending on the nature of the fund. Prices are published daily and are available on the Prescient website.

Performance has been calculated using net NAV to NAV numbers with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request.
